PROFILE

Computer Science graduate (University of Surrey) and AWS Certified Cloud Practitioner, looking to start a career as a software engineer. Interested in building and operating reliable backend systems and APIs, with a particular focus on Python, Java and cloud-native development.

EDUCATION

BSc (Hons) Computer Science Sep 2023 – Jul 2026
University of Surrey

- Key modules: Data Structures & Algorithms, Web Development (Django, MySQL), Systems Engineering, Parallel Computing (CUDA), Artificial Intelligence (PyTorch)

A Levels – Mathematics (A), Physics (B), Computer Science (C) Sep 2021 – Jun 2023
The Coopers' Company and Coborn School, Upminster

CERTIFICATIONS

- AWS Certified Cloud Practitioner (September 2025)
- AWS Certified Solutions Architect – Associate (currently studying)

EXPERIENCE & PROJECTS

PulseWatch — Real-Time Anomaly Detection & Alerting Pipeline Oct 2026
Personal project | Python, FastAPI, Redis Streams, PostgreSQL, Docker, AWS EC2, GitHub Actions | github.com/BismarkA17/pulse-watch

- Built and deployed on AWS EC2 a real-time anomaly detection and alerting pipeline that detected 96.9% of 4,812 injected latency spikes with a 0.21% false-positive rate across 244,000+ readings over 22+ hours, by streaming metrics through Redis Streams into a Python worker using rolling z-score detection with PostgreSQL persistence.
- Cut the false-alert rate by 46% (0.39% to 0.21%) with no loss in detection accuracy, by analysing production false positives, finding half were non-actionable low-latency deviations, and switching to a one-sided detection threshold.
- Achieved zero message loss across worker crashes, malformed events and database outages, verified through failure-injection testing, by using Redis consumer groups with acknowledgements, pending-message recovery, poison-message handling and exponential-backoff reconnection.
- Shipped a 5-service containerised stack (Docker Compose) with 26 automated tests and an 80% coverage gate in GitHub Actions CI, exposing incident management through a FastAPI REST API (open → acknowledged → resolved lifecycle, conflict handling 404/409/422) that recovers automatically after server reboots.

Business Revenue & Performance Analytics Dashboard Dec 2025 – Jan 2026
Personal project | Python, Streamlit, Pandas, Plotly | github.com/BismarkA17/business-revenue-dashboard

- Turned 4,380 rows of daily sales data (12 products across 4 categories over 365 days) into 3 live KPIs – total revenue, units sold and average selling price – by building an interactive Streamlit dashboard.
- Let users break revenue down by 3 dimensions (category, channel and region) with instant recalculation, by adding sidebar filters and caching the dataset.

Crew Member Oct 2023 – Present
McDonald's, Guildford

- Processed over £1,000 in sales per hour during peak rush hours while working 3 days a week alongside a full-time degree, by keeping orders fast and accurate across counter and drive-thru.
- Trained 20+ new starters to work independently on shift by taking them through operating procedures and food-safety standards.

JOB SIMULATIONS

Citi Technology Software Development Job Simulation Sep 2026
Forage | Java, UML | Certificate of completion

- Gave users live visibility of stock market risk, with prices updating in real time, by building an internal Java tool that streams market data into a live chart.
- Modelled every stage of a loan's lifecycle in Citi's loan management system by designing a UML state diagram mapping each state and transition.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL
Frameworks & Libraries: Django, Streamlit, Pandas, Plotly, PyTorch, REST APIs, OAuth
Tools: Git/GitHub, Docker, MySQL, Linux, AWS (EC2, S3), UML, Agile

INTERESTS

Basketball (playing since age 11), gym and running, and exploring new frameworks through collaborative coding challenges.
